SPECIALIZED DISCLOSURE REPORT

SYNAPTICS INCORPORATED
(Exact name of registrant as specified in its charter)

DELAWARE	000-49602	77-0118518
(State or other jurisdiction of incorporation)	(Commission File Number)	(I.R.S. Employer Identification No.)

1251 McKay Drive
San Jose, California 95131
(Address of principal executive offices, including zip code)

(408) 904-1100
(Name and telephone number, including area code, of the person to contact in connection with this report)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

☒ Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2015.

Section 1 – Conflict Minerals Disclosure

Item 1.01. Conflict Minerals Disclosure and Report.

Conflict Minerals Disclosure

Synaptics Incorporated (including its consolidated subsidiaries, the "Registrant") is filing this Form SD pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 for the reporting period from January 1, 2015 to December 31, 2015 (the "Reporting Period").

For the Reporting Period, the Registrant conducted, in good faith, a reasonable country of origin inquiry regarding the conflict minerals that are necessary to the functionality or production of products that the Registrant manufactures or contracts to manufacture (the "Minerals"). The inquiry was reasonably designed to determine if the Minerals originated in the Democratic Republic of the Congo or an adjoining country or are from recycled or scrap sources.

The Registrant has determined that it is required to file a Conflict Minerals Report, which is attached as Exhibit 1.01 to this report. The Conflict Minerals Report is also publicly available at http://www.synaptics.com. The content on, or accessible through, any website referred to in this Form SD is not incorporated by reference into this Form SD unless expressly noted.

Item 1.02. Exhibit.

The Registrant's Conflict Minerals Report is included as Exhibit 1.01 to this report.

Section 2 – Exhibits

Item 2.01. Exhibits.

Exhibit Number	Description
1.01	Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the Registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

Synaptics Incorporated

By: /s/ Alex Wong

Alex Wong

Senior Vice President of Worldwide Operations

May 27, 2016

Exhibit 1.01

CONFLICT MINERALS REPORT

This Conflict Minerals Report ("Report") of Synaptics Incorporated and its consolidated subsidiaries ("Synaptics," the "Registrant" or "we") for the year ended December 31, 2015 (the "Reporting Period"), is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the "Rule"), the instructions to Form SD, and the Public Statement on the Effect of the Recent Court of Appeals Decision on the Conflict Minerals Rule issued by the Director of the Division of Corporation Finance of the Securities and Exchange Commission on April 29, 2014. Please refer to the Rule, Form SD, and the Securities and Exchange Commission's ("SEC") Release No. 34-67716 issued by the SEC on August 22, 2012 for definitions to the terms used in this Report, unless otherwise defined herein.

Synaptics is a leading worldwide developer and supplier of custom-designed human interface semiconductor product solutions that enable people to interact more easily and intuitively with a wide variety of mobile computing, communications, entertainment, and other electronic devices. Synaptics currently targets the markets for mobile product applications, including smartphones and tablets; the personal computer, or PC, product applications market, primarily notebook computers; and other select electronic device markets, including the automotive market, with our customized human interface solutions. Every solution we deliver either contains or consists of our touch-, display driver- or fingerprint authentication-based semiconductor solutions, which includes our chip, customer-specific firmware, and software. We generally supply our human interface solutions to our original equipment manufacturer (OEM) customers through their contract manufacturers, which take delivery of our products and pay us directly for such products.

Synaptics does not engage in the actual mining of conflict minerals (the "Minerals"), does not make purchases of raw ore or unrefined Minerals from mines, and is many steps removed in the supply chain from the mining of the Minerals. We purchase the materials used in our products from a large network of suppliers, who may contribute necessary Minerals to our products. The smelters and refiners used by our suppliers are in the best position in the total supply chain to know the origin of ores, which cannot be determined with any certainty once the ores are smelted, refined and converted to ingots, bullions or other Minerals containing derivatives. We rely on our suppliers to assist with our due diligence efforts, including our suppliers' self-identification of the smelters and refiners used in their supply chain, and the countries from which the Minerals used in their supply chain may originate.

I. Products

The following products were identified during the Reporting Period as products that may contain conflict minerals necessary to the functionality or production of products manufactured, or contracted to manufacture, by Synaptics:

- Our mobile solutions include our ClearPad™ product line, designed for clear, capacitive touchscreen solutions that enable the user to interact directly with the display on electronic devices, such as mobile smartphones and tablets, and our family of Liquid Crystal Display (LCD) drivers. We typically sell our ClearPad products as a chip, together with customer-specific firmware, to sensor manufacturers or LCD manufacturers to integrate into their touch-enabled products. A discrete touchscreen product typically consists of a transparent, thin capacitive sensor that can be placed over any display, such as an LCD or an Organic Light Emitting Diode (OLED) and combined with a flexible circuit material and a touch controller chip.
- Our display driver products offer advanced image processing technology for entry-level smartphones through high-resolution tablets. The adaptive image processing works in concert with proprietary customization options enabling development of efficient and cost-effective high performance solutions and faster time to market. We typically sell these products to LCD manufacturers.
- Our personal computer, or PC, solutions, include our TouchPad™, ClickPad™, ForcePad™, SecurePad™, Dual Pointing Solutions, and TouchStyk™ product lines, which are touch-sensitive pads and other interfaces that sense the position, movement, force, or a combination thereof, applied by one or more fingers on its surface through the measurement of capacitance. We typically sell our PC solutions as a module to the contract manufacturers of OEMs for assembly into notebook computers or other PC products.
- Our Natural ID™ Fingerprint Identification products, used in both our mobile and PC solutions, are fingerprint authentication solutions that use capacitive imaging technology, along with sophisticated digital image processing to unlock devices and access online services such as retail, banking, and social media portals. We typically sell our Natural ID Fingerprint products as a module to the contract manufacturers of OEMs or directly to the OEM for assembly into mobile or PC products.

II. **Due Diligence**

Based on the OECD Due Diligence Guidance for Responsible Supply Chain of Minerals from Conflict-Affected and High-Risk Areas (Second Edition OECD 2013) and the due diligence framework published by the Electronic Industry Citizenship Coalition (EICC) and the Global e-Sustainability Initiative (GeSI), including the Conflict-Free Sourcing Initiative (CFSI) current template for calendar year 2015 as developed jointly by the EICC-GeSI (the "Template"), the Registrant took the following measures, during the Reporting Period, to determine the source and chain of custody for the Minerals which the Registrant believed necessary to the functionality or production of products manufactured, or contracted to be manufactured, by the Registrant in the Reporting Period.

1. The Registrant identified 59 suppliers, whom the Registrant believed could provide materials containing the Minerals necessary to the

functionality or production of products manufactured by the Registrant, or contracted by the Registrant to be manufactured.

2. The Registrant sent out a Conflict Minerals survey, based on the Template, to the suppliers described in No. 1 above requesting them to (a) determine whether they supplied the Registrant with metals or materials containing tin, tungsten, tantalum and/or gold; (b) conduct their own due diligence of their own supply chain; (c) using EICC-GeSI resources, identify all smelters in their supply chain that supply tin, tantalum, tungsten and/or gold; and (d) download, complete and return the Template to the Registrant identifying all smelters and whether such smelters were certified as conflict-free. For any non-conflict free certified smelters identified, the Registrant strongly recommended that the supplier remove such non-conflict free certified smelters from the supplier's supply chain and required the supplier to submit a plan detailing the supplier's efforts to remove or replace the non-conflict free certified smelter. In addition, Registrant's suppliers were required to establish and document a policy on conflict minerals.

3. All suppliers identified in No. 1 above completed the steps described in No. 2 above. Eight suppliers declared that their products did not contain any conflict minerals. Of the 51 suppliers who stated their products may contain conflict minerals, approximately 71% stated gold may be in the products supplied to Registrant; approximately 76% stated tin may be in the products supplied to Registrant; approximately 16% stated tantalum may be in the products supplied to Registrant; and approximately 29% stated tungsten may be in the products supplied to Registrant.

4. All of the suppliers who responded identified all smelters used in their supply chain in accordance with the Template and its instructions and of these suppliers, 88% certified that the metals or materials they supplied to Synaptics were conflict-free Minerals.

5. Synaptics compared the smelters identified by each of our suppliers to the list of smelters identified as conflict-free or "Active" by CFSI. Approximately 86% of the smelters used by our suppliers appeared on this list and are certified by the CFSI as conflict-free smelters or as Active smelters currently undergoing or committed to undergoing a Conflict-Free Smelter Program (CFSP) audit. Based on the information provided by our suppliers, Synaptics believes that the facilities that may have been used to process conflict minerals used in Synaptics' products include the smelters listed in Exhibit A below.

6. a. Our suppliers used approximately 45 different smelters located in 12 different countries for tantalum. These countries include Austria, Brazil, China, Estonia, Germany, India, Japan, Kazakhstan, Mexico, Russian Federation, Thailand and the United

States. Of these smelters, 100% are certified conflict-free smelters according to the CFSI which is the same percentage of smelters who were certified as conflict-free in the Registrant's prior reporting period.

b. Our suppliers used approximately 113 different smelters located in 29 different countries for gold. Those countries include Australia, Austria, Belgium, Brazil, Canada, China, Germany, India, Indonesia, Italy, Japan, Kazakhstan, Kyrgyzstan, Mexico, Netherlands, Philippines, Russian Federation, Saudi Arabia, Singapore, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, the United States and Uzbekistan. Of these smelters, approximately 79% are certified conflict-free smelters or are Active smelters as defined by the CFSI compared to 84% of these smelters who were certified as conflict-free or were Active smelters as defined by the CFSI in the Registrant's prior reporting period.

c. Our suppliers used approximately 81 different smelters located in 17 different countries for tin. These countries include Belgium, Bolivia, Brazil, China, Germany, Indonesia, Japan, Malaysia, Peru, Philippines, Poland, Rwanda, Spain, Taiwan, Thailand, the United States, and Vietnam. Of these smelters, approximately 84% are certified conflict-free smelters or are Active smelters as defined by the CFSI compared to 76% of these smelters who were certified as conflict-free or were Active smelters as defined by the CFSI in the Registrant's prior reporting period.

d. Our suppliers used approximately 36 different smelters located in 7 different countries for tungsten. These countries include Austria, China, Germany, Japan, Russian Federation, the United States, and Vietnam. Of these smelters, 94% are certified conflict-free smelters or are Active smelters as defined by the CFSI compared to 65% of these smelters who were certified as conflict-free in the Registrant's prior reporting period.

7. Based on these due diligence efforts, Synaptics is unable, at this time, to conclusively determine the countries of origin of all the Minerals used in its products.

During the Reporting Period, we conducted the due diligence efforts described in this Report to determine the mine or location of the necessary conflict minerals in our products. We relied on the information provided by independent third party audit programs, such as the CFSI, to determine whether the smelters disclosed by our suppliers had been conflict-free certified or were "Active smelters" who had committed to undergo a Conflict-Free Smelter Program audit, according to the CFSI's standards. For the current

Reporting Period, certain smelters had not yet received a conflict-free designation from an independent third party audit program such as the CFSI.

We strongly recommended suppliers who had non-conflict free certified smelters in their supply chain in calendar year 2015 to remove such non-conflict free certified smelters from their supply chain as soon as possible and required such suppliers to submit a plan to the Registrant detailing their efforts to either remove or replace such smelter. We have an audit plan in place, which was created to specifically audit the design, performance and effectiveness of our due diligence framework and due diligence measures as they relate to the Minerals.

As discussed above, where possible, the Registrant has relied on third party assurances and certifications. For example, the Registrant accepts as reliable any smelter that is a member of the CFSI program. To the extent that other audited supplier certifications are provided to the Registrant, the Registrant may consider reliance on such certifications on a case-by-case basis.

III. **Additional Due Diligence and Risk Mitigation**

We will continue to monitor our supply chain, including smelters used by our suppliers and anticipate that in future years, we will be able to determine, with greater specificity, which of the smelters used by our suppliers are conflict-free. We will continue to monitor and pressure our supply chain to provide complete and accurate information regarding their smelters who provide the Minerals; continue to pressure our supply chain to either remove or replace non-conflict free certified smelters from their own supply chain; remove from our supply chain those suppliers who refuse to or who are unable to provide complete information regarding their smelters; remove from our supply chain those suppliers who continue to maintain non-conflict free certified smelters in their supply chain; and audit the results of supplier responses to the Template, including potential site visits to our supplier locations around the world.

Due to the size, breadth and complexity of our supply chain, the process of successfully tracing all of the necessary Minerals used in our products back to their country of origin will require additional time and resources. Our ability to make determinations about the presence and source of origin of such Minerals in our products depends upon a number of factors including, but not limited to, (i) the respective due diligence efforts of our tier one suppliers and their supply chain, as well as their willingness to disclose such information to us, and (ii) the ability and willingness of our supply chain to adopt the OECD Guidance and other initiatives or guidance that may develop over time with respect to responsible sourcing. The inability to obtain reliable information from any level of our supply chain could have a material impact on our ability to provide meaningful information on the presence and origin of necessary Minerals in our products' supply chain with any reasonable degree of certainty. There can be no assurance that our suppliers will continue to cooperate with our diligence inquiries and our requests for certifications, or to provide us with the documentation or other evidence that we consider reliable in a timeframe sufficient to allow us to make a reasonable and reliable assessment following appropriate further diligence measures, as may be required.

Exhibit A

Smelters Reported in Registrant's Supply Chain as of December 31, 2015:

Smelter Name	Smelter Country
